

Background and Framing:

The audience needs to know some basics about threading and concurrent programming or order to give us useful feedback on our problems. Since our problems are mainly related to executing the program in the correct order, knowledge of how computers execute code is needed to understand where our problem lies.

Key Questions:

For this code review, our key questions are basically, “How can we fix these problems that we have?” The problems that we have are running event listeners and scripts at the same time, and running all the independent scripts in order and to completion.

Review Agenda:

Out of our 25 minutes, we hope to break it up into the following sections:

5 minutes of presentation

20 minutes of back and forth with further explanation and demonstration mixed in
